REVENANT

Your team ships what to do.
We keep the why.

The AI symbiote for engineering teams. Capture decisions from PRs, Slack, Jira, and email — turn them into source-grounded memory your team can query.

SEED ROUND 2025

CANADA

THE CONTEXT

Engineering knowledge disappears faster than it’s created.

$47M

lost per year at large enterprises from inefficient knowledge sharing

PANOPTO / IDC WORKPLACE KNOWLEDGE STUDY

42%

of institutional knowledge exists only in one person’s head — leaves when they do

PANOPTO WORKPLACE KNOWLEDGE STUDY

$31.5B

lost annually across Fortune 500 from failure to share knowledge

IDC / NUCLINO RESEARCH

60%

of engineering time consumed by “work about work” — searching, switching, chasing status

ASANA ANATOMY OF WORK INDEX

THE ISSUE

Every departure is a silent data breach of context.

$300K cost to replace a single mid-level software engineer

3–9 mo for new hires to reach full productivity

23% annual turnover in software engineering — 2x the cross-industry avg

THE TEAM

Built by engineers who've lived the problem.

O

CO-FOUNDER & CEO

Omar M.

Full-stack engineer and technical founder. Built the entire Revenant platform end-to-end — from WebGL shaders to vector memory pipelines. Deep expertise in AI/ML, systems architecture, and developer tooling.

+

HIRING

Co-Founder

Actively seeking a co-founder with go-to-market expertise, enterprise sales experience, or deep domain knowledge in developer productivity and engineering management.

WHY THIS TEAM

Founder-Led Engineering

Solo-built a production-grade full-stack platform: Next.js 16, FastAPI, Three.js shaders, D3 visualizations, cognitive memory with Ebbinghaus decay, and Tavus avatar integration.

Technical Depth

Custom WebGL/OGL shaders, real-time voice reactivity, three-tier vector memory with namespace partitioning, and a full evaluation pipeline — not a wrapper on an API.

Speed of Execution

Shipped a working demo-ready product with OAuth integration, real-time pipelines, and polished UI as a solo founder. Proven ability to move fast with limited resources.

THE SOLUTION

Revenant captures the reasoning. Not just the result.

An AI symbiote that lives inside your engineering tools, extracts decision context automatically, and builds a living knowledge base accessed through an AI mentor.

01

Capture

Sync GitHub PRs, Slack threads, Jira tickets, and email into one memory stream — zero extra docs required from engineers.

- GitHub
- Slack
- Jira
- Gmail

02

Interpret

AI clusters decisions, summarizes tradeoffs, and promotes high-signal context into durable three-tier cognitive memory.

SEMANTIC | EPISODIC | PROCEDURAL

03

Mentor

Engineers ask questions and get source-grounded answers with links to the original PRs, threads, and tickets.

> *"Why is auth retry logic coupled to deploy sequencing?"*
> *→ Answered with PR #481, Slack thread, and postmortem*

THE PRODUCT

The Founder Console

FOUNDER MENTOR

PIPELINE | MEMORY | CODE

"Why did the team keep auth retry logic inside deploy sequencing?"

During the April incident, queue delays caused token expiry during blue-green cutovers. The coupling stayed in place — the rollback conditions were captured in review threads and the postmortem.

GitHub PR #481 | Slack #auth-war-room | Jira ARC-219

Ask your engineering memory...

AI VIDEO AVATAR

Tavus-powered founder avatar delivers answers face-to-face

Builds trust and engagement beyond a chatbot.

COGNITIVE MEMORY

Three-tier memory with Ebbinghaus decay

Semantic, episodic, and procedural namespaces weight context by relevance and recency.

AUDIT TRAIL

Every answer traces to source artifacts

PRs, threads, tickets — fully traceable, no hallucinations.

HABIT ENGINE

Evaluates engineering health in real-time

Scores habits across tools, surfaces coaching insights.

BUSINESS MODEL

SaaS with usage-based expansion.

PILOT

Free

Up to 5 engineers

- 4 integrations (GitHub, Slack, Jira, Gmail)
- Basic memory recall
- 14-day memory retention
- Community support

TEAM

$49 /eng/mo

Up to 50 engineers

- Unlimited integrations
- Full cognitive memory (3-tier)
- AI video mentor avatar
- Unlimited retention
- Priority support + onboarding

ENTERPRISE

Custom

Unlimited engineers

- Self-hosted / VPC deployment
- SSO + SAML authentication
- Custom memory policies
- Dedicated support + SLA
- Advanced analytics + admin

120%+ Target net dollar retention

~$30K Average ACV at 50-eng team

PLG Product-led growth with free pilot tier

$588 Annual per-seat revenue

COMPETITIVE LANDSCAPE

No one else captures the “why” behind engineering decisions.

CAPABILITY	REVENANT	CONFLUENCE / NOTION	GITHUB COPILOT
Cross-tool decision capture (zero-effort)	✓	✗	✗
Source-grounded answers with full citations	✓	~	✗
AI mentor interface (video avatar)	✓	✗	✗
Three-tier cognitive memory with decay	✓	✗	✗
Incident & architecture context recall	✓	~	✗
Engineering habit evaluation & scoring	✓	✗	✗
Works passively across PR, chat, ticket, email	✓	✗	~

Key differentiator: Confluence and Notion require engineers to write docs. Copilot only helps with code. Revenant captures decision context passively across all tools and makes it queryable.

HONEST RISKS

What keeps us up at night — and how we're addressing it.

SINGLE FOUNDER

Solo founder risk

One person building the entire platform creates key-person dependency and limits velocity on non-engineering work.

> Actively recruiting a GTM co-founder. Product is already demo-ready, proving execution capability. Architecture is modular and well-documented.

PRE-REVENUE

No revenue or paying customers yet

Product is demo-ready but hasn't been deployed with live engineering teams generating real usage data.

> Free pilot tier designed for fast activation. Targeting 5 design partners in first 90 days post-raise to validate retention and pricing.

LLM DEPENDENCY

Dependent on third-party AI models

Core evaluation and recall powered by Anthropic Claude. API pricing changes or model degradation could impact margins.

> Architecture supports model-swapping. Memory layer is model-agnostic. Evaluating fine-tuned open-source models as cost optimization path.

ENTERPRISE SECURITY

Enterprises may resist sending data to external tools

Engineering teams handle sensitive code and decisions. Security and compliance concerns are real.

> Enterprise tier includes self-hosted/VPC deployment. SOC 2 compliance on roadmap. Data stays within customer environment for Enterprise customers.

THE RAISE

Equity structure & use of funds.

$2M CAD

Pre-Seed / Seed Round — SAFE or priced round

USE OF FUNDS

45%	Engineering & Product	Hire 2-3 engineers, scale infra
25%	Go-to-Market	Sales, partnerships, community
20%	AI & Infrastructure	LLM costs, vector DB, compute
10%	Operations	Legal, accounting, runway buffer

18-MONTH MILESTONES

- 50+ engineering teams on platform
- $500K ARR through PLG + direct sales
- 12+ tool integrations
- Position for Series A at $2M+ ARR

REVENANT

Your team is shipping. Are you preserving the judgment?

We're building the memory layer for engineering teams. Let's talk about how Revenant fits into your portfolio thesis.
